DIVISION 400 - APPROVED MATERIAL LIST AND STANDARD DETAILS

DIVISION 400 - APPROVED MATERIAL LIST AND STANDARD DETAILS

SECTION 401 - GENERAL

This Division shall govern the construction of water system facilities under the jurisdiction of the Department of Water Supply of the various counties in the State of Hawaii.

Requirements peculiar to each department are reflected in these standards by tables and special notes. Also certain features of water system installations which do not readily lend themselves to standardization but are designed and installed according to the special requirements applying to each case shall be subject to special review and approval of the Manager.

Any feature of materials to be installed, or construction methods to be used for any installation within the scope of the Water System Standards, but not specifically described herein, shall be of good quality, according to accepted practice, and shall meet with the approval of the Manager.

Materials are specified as acceptable items by means of the manufacturer's catalog designations or reference numbers rather than by detailed specifications. Such references are frequently changed by the manufacturer. For any modifications to the material and the identification number, the manufacturer shall resubmit the material for review and approval by the Manager prior to incorporation to the water system standards and installation for water system improvements. For any changes to catalog designations, reference numbers and manufacturer's name, a formal letter indicating such changes shall be submitted to the Manager. If any reference number is found to be obsolete, the Manager should be consulted for the latest designation.

If there are any modifications to the standard details as required by the project's scope of work, such modifications shall be shown on the construction plans. Revised details shall be submitted for review and approval by the Manager prior to construction.
